

Jason Nguyen

I'm currently a student at Michigan State University pursuing a bachelor's degree in Information Science learning the field of UX Design.

During my undergraduate career, I originally majored in criminal justice to study people and see what I could do to make people's lives better but that didn't work out for me. Then I switched to an IT major because I enjoy being around technology and loved technological things but strictly being around technology wasn't for me either. So I ended up majoring in Information Science for UX design because it's the best of both worlds. I get to design for people around the world while being around technology.

Shorthand Flow

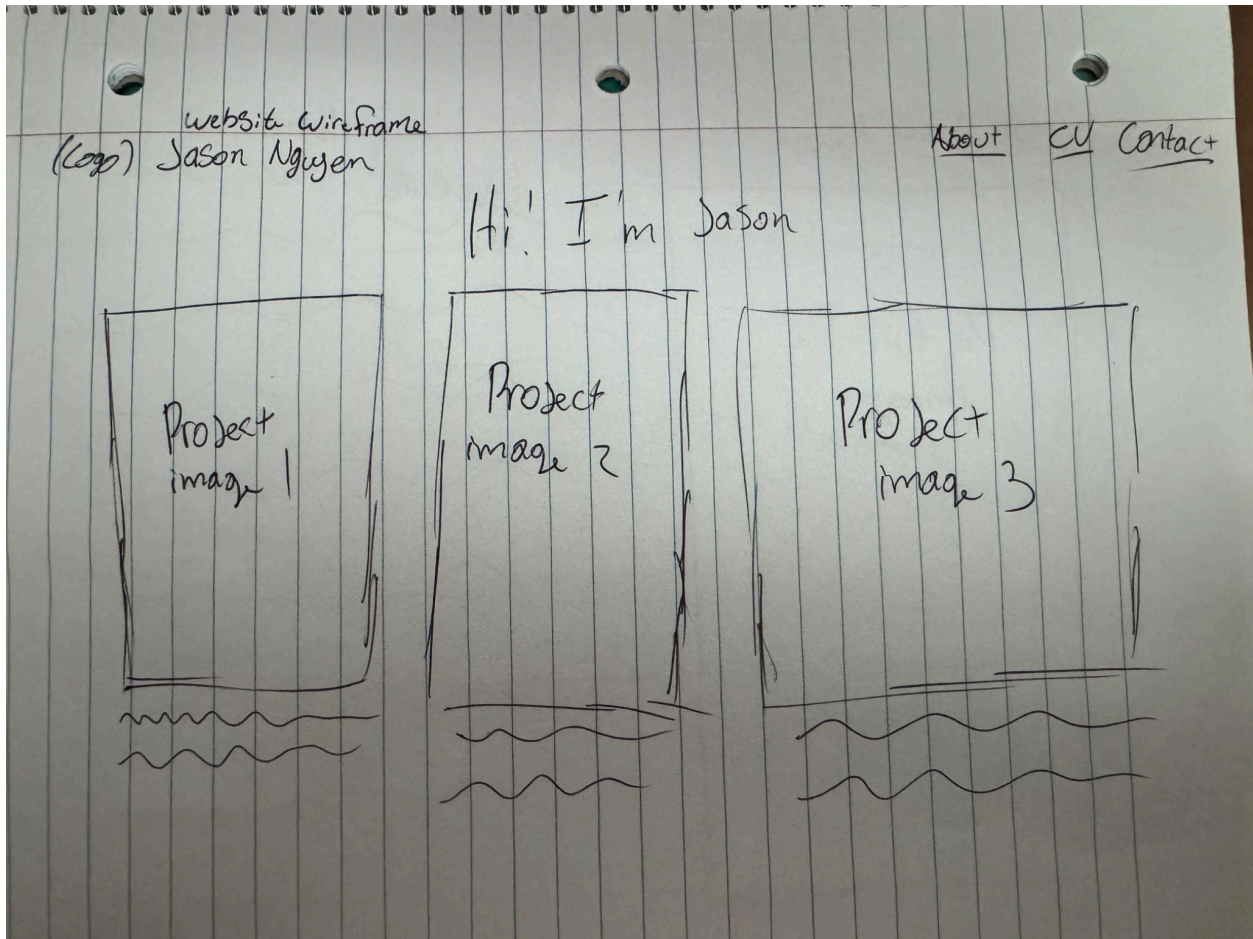

Website Portfolio Shorthand Flow

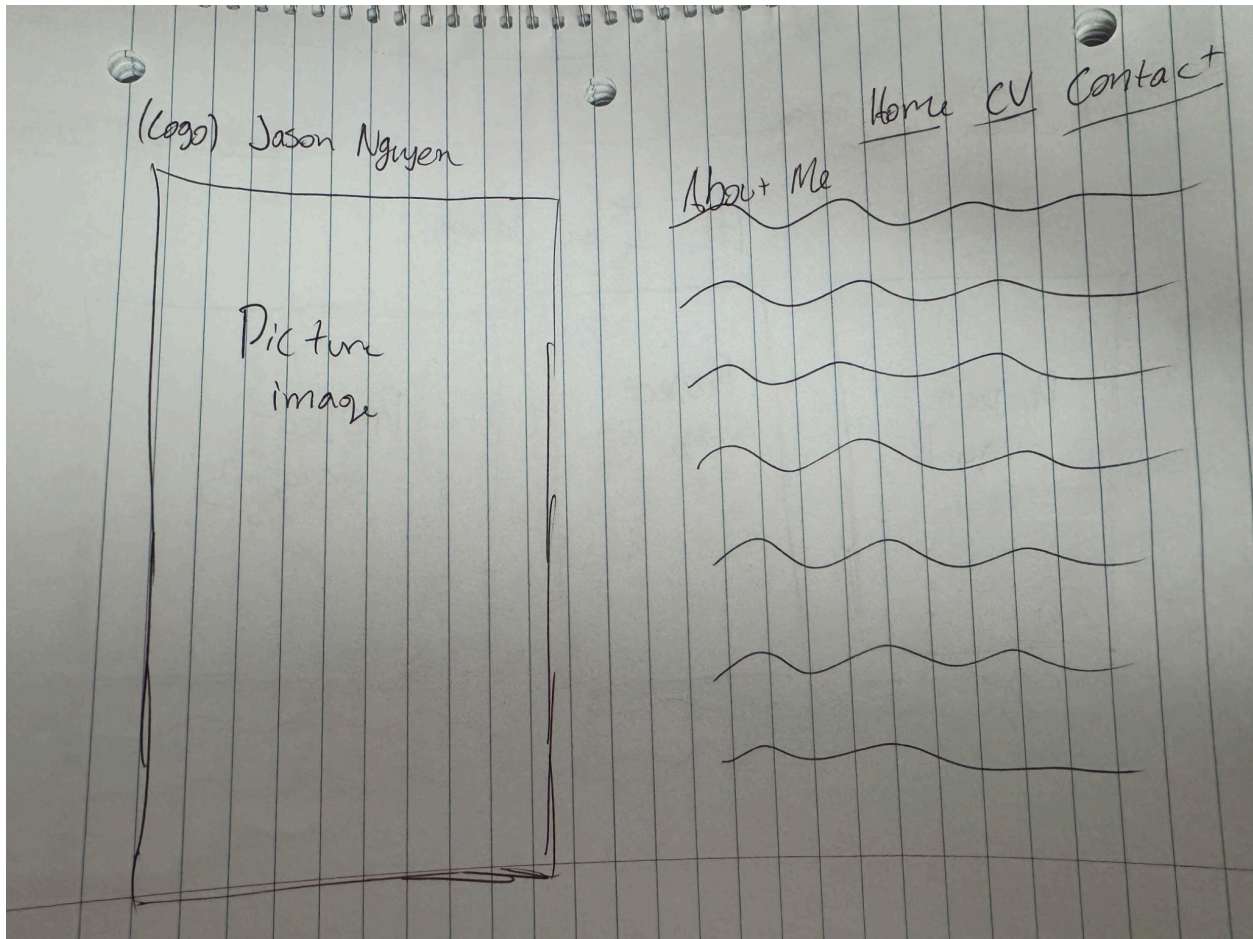

My shorthand flow shows all the clickables from the homepage. The first page will display projects users can click on telling a little about it and users will be able to go through figma prototypes of the project. Users can click the about me page to read about me. They can also click on contact to see me linkedIn and email that they can interact with and then there's my resume that users can review.

Wiresheet

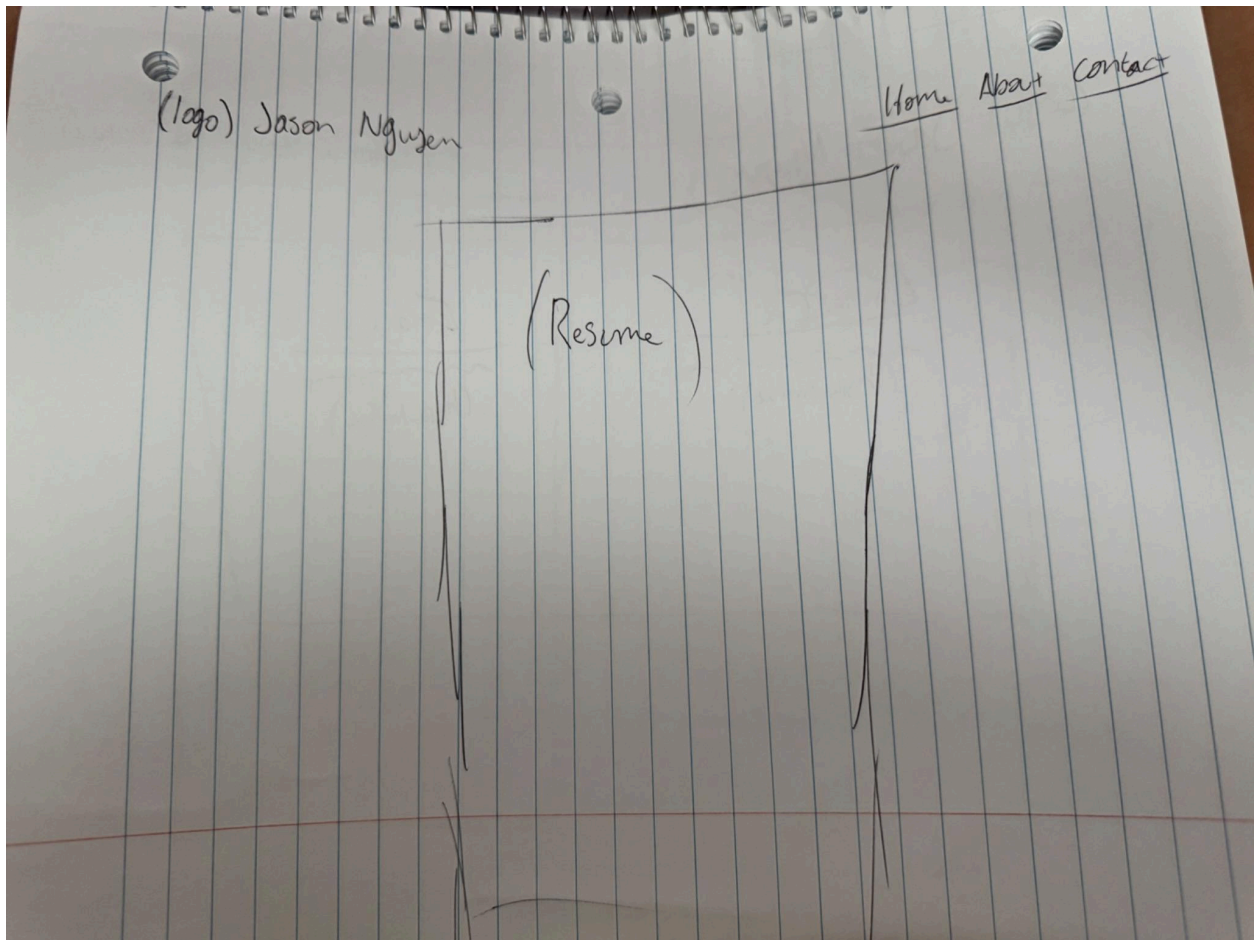

The home page will soon show all future projects that users should be able to click on

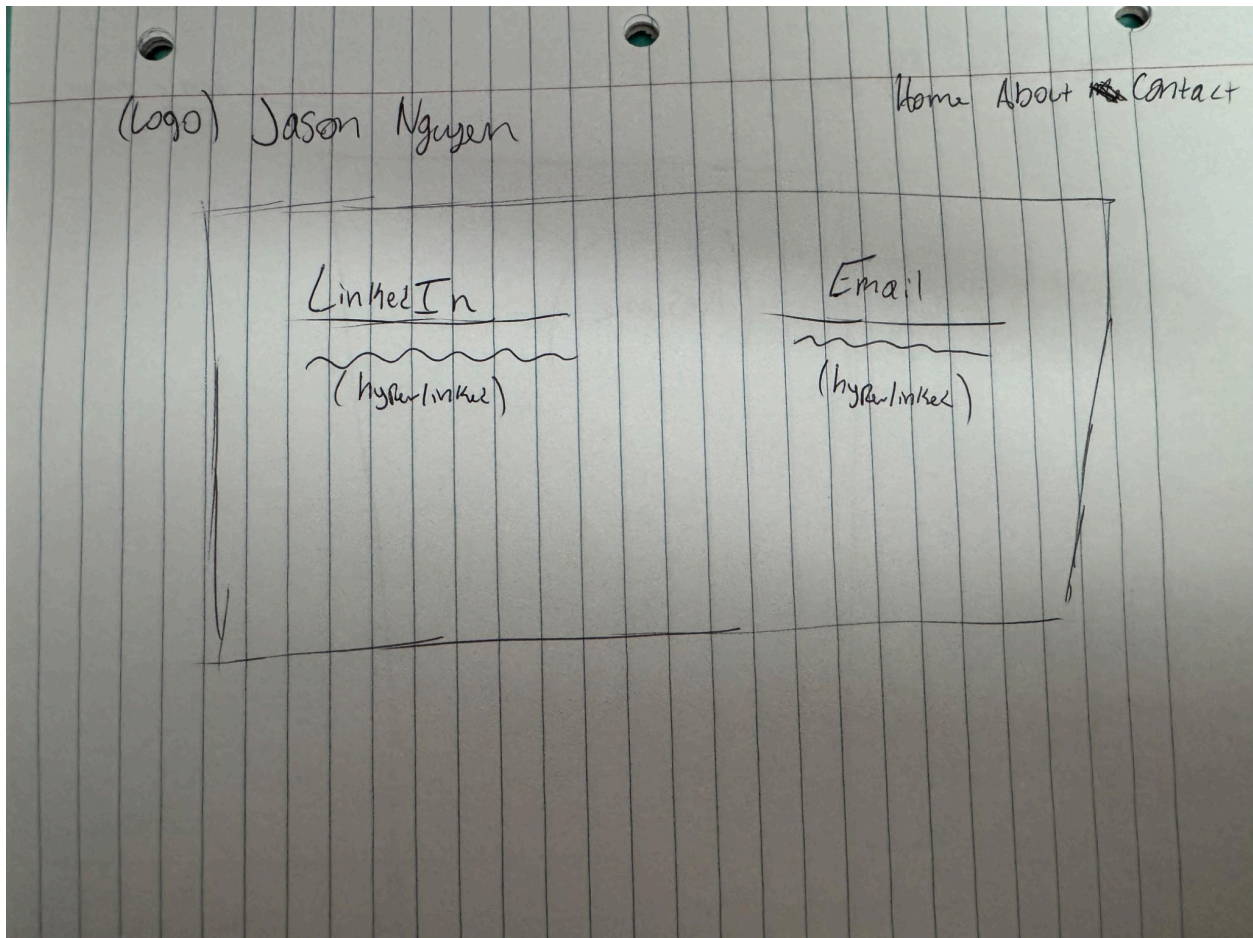

My about me page will display an image of me and a description about me.

My resume where users will be able to review.

My contact page where users can interact with the links to send an email and/or look through my linkedIn
